

Boo's Rechargeable 360-ROD+ Static Detector

Intro

The rechargeable 360+ is an established 360 Static Detector that employs a lithium-ion battery. It encompasses 5 acrylic ROD LEDs that are regulated by two distinct circuits, housing 10 LEDs per circuit. Each circuit comprises of five colors - two Red, two Orange, two Yellow, two Green, and two Blue. Upon detecting static, the 360 will illuminate LEDs as per the static it has detected. This advanced functionality theoretically enables the user to request the spirits to activate a specific side, a particular color or allow the 360 to interact with them.

Setup and Use

The rechargeable 360 Static Detector has a built-in lithium-ion battery and comes with a specific type charger. Do not use any other charger to charge the 360 failure to do so could cause a fire or damage your 360. To recharge the 360 simply plug the charger into a wall outlet and plug the barrel connector into the 360. Red and green LEDs on the charge indicate charging status. Green led indicate battery is fully charged. Red led indicates battery is currently charging.

The 360 comes equipped with two antennas. While the 360 can be used with or without the antennas, we recommend testing with and without to ensure your preferred performance. Installing the antennas is easy - simply screw them onto the antenna studs and hand-tighten without excessive force. The power switch is located at the center of the top, and when turned on a small LED lights up above the switch. After turning on the 360, it may accumulate a charge from the static on your body. Please allow 30-60 seconds for the detector to discharge on its own. If it fails to discharge, try touching the antennas to release the static charge. The 360 is ready to use when all 20 LEDs turn off. Depending on the weather sometimes the 360 may require a little longer to discharge but can be used, ask the spirits to turn it off for you.
